ABOUT ME

Motivated software developer completing a Level 5 Diploma in Software Development, with real-world internship experience and a portfolio of independently built applications. Skilled in Python, FastAPI, React, and JavaScript, with a strong foundation in backend systems, REST APIs, and database design. Passionate about building scalable, practical solutions to real problems.

EXPERIENCE

Junior Backend Developer (Intern)

Techwise · 2025 – Present | Kigali

- Developed and maintained REST APIs using FastAPI, handling authentication, routing, and business logic.
- Optimised database queries and contributed to schema design and normalisation.
- Collaborated with senior developers on production-level systems, following Git-based workflows.

Freelance Web Developer

Self-employed · 2025 – Present

- Designed and delivered websites and backend systems for small businesses and individual clients.
- Managed client requirements, timelines, and revisions independently from brief to deployment.

IT Support Assistant

World Mission High School Lab · 2024 – 2025 | Kigali

- Provided technical support for lab equipment, handling troubleshooting, setup, and routine maintenance.
- Supported students and staff with software issues and network connectivity.

EDUCATION

Level 5 Diploma in Software Development

World Mission High School, Kigali, Rwanda · 2023 – Present | Kigali, Rwanda

TECHNICAL SKILLS

Languages	Python, JavaScript, PHP, Dart
Frameworks	FastAPI, React, Flutter
Web	HTML, CSS, REST APIs
Databases	SQL, Database Design, Normalisation
Concepts	OOP, SDLC, System Design, ER Diagrams
Tools	Git, JSON storage, VS Code

PROJECTS

Smart Voting System API

Full backend built with FastAPI featuring secure user authentication, role-based access, and complete voting logic. Designed to handle concurrent users reliably with a normalised SQL database.

School Management System

End-to-end system covering student records, course management, and reporting. Built to demonstrate real-world SDLC practice including ER diagram design, OOP architecture, and modular routing.

Movie / Anime Streaming Website

Full-stack streaming discovery platform with search, filtering, and content categorisation. Integrates external APIs and features a responsive React front-end.

Weather App

Real-time weather dashboard integrating the OpenWeather API, displaying current conditions and forecasts with a clean, responsive UI.

Multiplayer Tag Game

Browser-based multiplayer game built around real-time game logic and state management, demonstrating JavaScript event handling and multi-user interaction design.
